ABOUT ME

With almost three years of experience as a front-end developer, I have a solid command of JavaScript and TypeScript, and have worked extensively with React and Next.js (including App Router and Server/Client Components). I specialize in building scalable and high-performing interfaces, applying best practices in SSR and SSG, and refining every visual detail with a strong focus on user experience.

Professional Experience

Front-end lead Developer

Trade Net Hub- April 2024 – Present

I led the front-end development of a custom ERP system, built from scratch for an international trade platform. The project included multiple modules and key functionalities:

- **Led the frontend team**, making architectural decisions and mentoring junior developers in their technical growth.
- **Designed and implemented** the application architecture using **React, TypeScript, and Next.js**, incorporating **GraphQL** along with role-based authentication and authorization via Firebase.
- **Developed** a fully custom scheduling and calendar system **from scratch**, including both logic and UI.
- **Integrated external services** such as **SeaRates** for customs and international logistics operations.
- Implemented a complete **accounting system** for invoicing.
- Built **interactive dashboards** using **shadcn/ui** and **Recharts** to visualize KPIs and business metrics.
- Added **multilingual functionality** (i18n) and **currency exchange handling for global operations** via the Exchange Rate API.
- Integrated DocuSign for digital document signing, streamlining the client's contractual workflows.
- Worked closely with backend and design teams to ensure visual consistency, accessibility, and performance.

Front end Developer

Imajine LLC - November 2022 – April 2024

During my time with this team, I worked on the development and evolution of digital products, collaborating with design, backend, and other key areas. These were some of my main responsibilities and achievements:

- **Implemented scalable interfaces using React and Next.js**, leveraging the App Router and Server/Client components.
- Worked with **JavaScript**, following best practices to ensure clean, maintainable, and efficient code.
- **Integrated REST APIs**, ensuring smooth communication between frontend and backend.
- **Applied SSR, SSG, and ISR** to optimize performance and improve user experience.
- Used build tools like **Webpack** and the **SASS preprocessor** to enhance load times and optimize bundles.
- **Developed reusable components** and responsive design using **Tailwind, Bootstrap, and shadcn/ui**.
- **Collaborated closely with the design team** using Figma.
- **Coordinated tasks in agile sprints**, prioritizing based on impact and actively contributing to code reviews and refinement sessions.
- Integrated **multilingual functionality** (i18n) and configurations tailored to different users/clients within the same product.
- **Worked on the development of a SaaS product from scratch**, participating in the initial construction of the platform alongside the product and design teams.

TECHNICAL SKILLS

Extensive experience in

React	Jira
NextJS	Agile methodologies
HTML CSS	Scrum
Vanilla JS	
TypeScript	

Knowledge of

NodeJS	Python
NestJS	Express

SOFT SKILLS

Group communication	Teaching ability
Problem solving	Conflict mediation
Resource management	Quick adaptability
Time management	Team leadership and motivation
Critical thinking	

LANGUAGES

- English (B2)
- Spanish (Native)
